

Toll scenarios and events

PTV Europe City Map Premium 2025.1H

the mind of movement

Each scenario is caused by a defined event in reality for which different successive event versions may exist. For example, in France a new tariff table would be an event, an estimate on the future toll on secondary highways would be another event. As the knowledge about future tolling schemes increases, new versions of one specific event come into play, each in turn superseding the previous event version. The following document presents all events and event versions for countries with more than just the standard toll tables. The header contains: ISO3COUNTRY-EVENT-EVENTVERSION and the file number in brackets.
