

Toll scenarios and events

PTV Europe City Map Premium 2026.1H

the mind of movement

Each scenario is caused by a defined event in reality for which different successive event versions may exist. For example, in France a new tariff table would be an event, an estimate on the future toll on secondary highways would be another event. As the knowledge about future tolling schemes increases, new versions of one specific event come into play, each in turn superseding the previous event version. The following document presents all events and event versions for countries with more than just the standard toll tables. The header contains: ISO3COUNTRY-EVENT-EVENTVERSION and the file number in brackets.

Andorra

Andorra January 2024

AND Event 8.1 (TollScenarioID 1)

Content: This scenario contains the most recent tariffs, valid from January 2024. New tariffs for Tunnel d 'Envalira. This scenario replaces the previous 'Andorra January 2023' scenario. Type of calculation: Exact.

Source: Tunnel d'Envalira

Belarus

Belarus October 2020

BLR Event 5.1 (TollScenarioID 1)

Content: This scenario contains the most recent tariffs from December 2019. This scenario replaces the previous 'Belarus July 2019' scenario. New toll road. Type of calculation: Exact.

Source: BeToll

Valid from: 20191201

Relevance: 100

Belgium

Belgium July 2025

BEL Event 23.1 (TollScenarioID 1)

Content: This scenario includes the toll charges for trucks from a maximum authorised mass over 3.5 t in the three Belgian regions: Wallonia, Flanders and Brussels. New toll rates valid from 1st July, 2025 for all trucks in Flanders and Brussels. Motorways, other main roads and the local road network in Brussels are subject to tolls. Toll charges are calculated based on kilometre factors and depend on road type and further depend on the emission class and total weight of the vehicle. This scenario replaces the previous 'Belgium January 2025' scenario. Type of calculation: By approximation with an average factor per kilometer.
